

WaterWise Fall Brown Bag Workshop Series

An Introduction to the John Bunker Sands Wetland Center

Our most unique water supply source from the North Texas Municipal Water District (NTMWD) is located in our own backyard. The John Bunker Sands Wetland Center is located in the middle of a 2,000 acre man-made wetland that provides millions of gallons of additional drinking water while serving as a vital natural habitat for some of our most treasured wildlife in the region. Join John DeFillipo, JBS Wetland Director, as he returns to Frisco and demonstrates how lessons of stewardship learned in this amazing habitat can be integrated into our daily lives.

Topics covered will include:

- State of our current water supply
- A history of the public/private partnership between John Bunker Sands and NTMWD to create this important additional water supply
- Current Wetland Center research and educational programs
- An introduction to wildlife at JBS, including birding opportunities and the bald eagle nest

About the Speaker

John DeFillipo has over 19 years of experience blending ecological concepts with business insights. John moved to Dallas in 2008 to accept the Lead Natural Science Educator position with the Perot Museum of Nature and Science, before becoming the Director of the Wetland Center in 2010. Currently he serves as a board director for the Association of Nature Center Administrators (ANCA) and the Crandall Independent School District's Education Foundation.
